

Amendments to the Claims:

This listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended) A calendar screensaver method for a computer device comprising memory and a display, the method comprising the steps of:

- accessing an updatable schedule from the memory;
- displaying the updatable schedule on the computer display as a screensaving process at least while the computer device is in an inactive mode; and
- enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device ~~so that accessors of the computer display have reason and time dependant contact access of the user; and~~
enabling accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user.

Claim 2 (original) The calendar screensaver method of claim 1 wherein the step of accessing comprises accessing a hard drive for the schedule.

Claim 3 (original) The calendar screensaver method of claim 1 wherein the step of accessing comprises accessing random access memory.

Claim 4 (currently amended) A calendar screensaver method for a computer device comprising memory and a display, the method comprising the steps of:

- accessing an original, updatable schedule from the memory;
- displaying the original, updatable schedule on the computer display as a screensaving process while the computer device is in an inactive mode;
- if the updatable schedule is accessed while the computer device is in the

inactive mode, enabling input access to only the original, updatable schedule, for additional schedule inputs to create an amended schedule, while locking out other computer device functions; and

enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device ~~to provide accessors of the computer device with current contact information of the user with updated reason and time dependant information about the user; and~~

enabling accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user

Claim 5 (original) The calendar screensaver method of claim 4 wherein the step of enabling access comprises selectively enabling access in response to an input password.

Claim 6 (original) The calendar screensaver method of claim 4 and further including the step of determining conflicts between the amended schedule and the original schedule.

Claim 7 (original) The calendar screensaver method of claim 4 and further including the step of displaying a message substantially simultaneously with either the original schedule or the amended schedule.

Claim 8 (original) The calendar screensaver method of claim 7 and further including the step of remotely updating the message by text of an e-mail received by the computer device.

Claim 9 (original) The calendar screensaver method of claim 4 and further including the step of remotely updating the original schedule by text of an e-mail

received by the computer device.

Claim 10 (currently amended) A calendar screensaver method for a computer device comprising memory and a display, the method comprising the steps of:

accessing an original, updatable schedule from the memory;

displaying the original, updatable schedule on the computer display as a screensaving process while the computer device is in an inactive mode;

enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs to create an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device with plural and alternative contact methods during certain time periods of the matrix of a user of the computer device ~~so that accessors of the computer display have updated reason and time dependant contact information about of the user;~~ and

displaying the amended schedule on the computer display as the screensaver process to allow accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user.

Claim 11 (currently amended) A calendar screensaver method for a computer device comprising memory and a display, the method comprising the steps of:

accessing an original, updatable schedule, of a schedule user, from the memory;

displaying the original, updatable schedule on the computer display as a screensaving process while the computer device is in an inactive mode;

if the updatable schedule is accessed while the computer device is in the inactive mode, determining access privileges of an accessor;

in response to the access privileges, enabling input access to only appropriate portions of the original, updatable schedule, for additional schedule inputs to create an amended schedule, while locking out other computer device functions;

determining if a conflict exists between the amended schedule and the

original schedule;

informing the schedule user of the amended schedule; and

enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device ~~so that accessors of the computer display have reason and time dependant contact access of the user; and~~

enabling accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user.

Claim 12 (original) The calendar screensaver method of claim 11 wherein the step of informing comprises transmitting an email comprising the amended schedule.

Claim 13 (original) The calendar screensaver method of claim 11 wherein the step of informing comprises transmitting a wireless, text-enabled telephone compatible message to the wireless telephone.

Claim 14 (original) The calendar screensaver method of claim 11 wherein the step of informing comprises transmitting a pager message to the schedule user.

Claim 15 (original) The calendar screensaver method of claim 11 and further including the step of displaying a conflict error message if the conflict exists between the amended schedule and the original schedule.

Claim 16 (currently amended) A method for downloading a calendar screensaver process over the Internet, the method comprising the steps of:

accessing a predetermined World Wide Web site;

downloading the calendar screensaver process that comprises the steps of accessing an original, updatable schedule from the memory;

displaying the original, updatable schedule on the computer display as a

screensaving process while the computer device is in an inactive mode;

if the updatable schedule is accessed while the computer device is in the inactive mode, enabling input access to only the original, updatable schedule, for additional schedule inputs to create an amended schedule, while locking out other computer device functions; and

enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device ~~to provide accessors of the computer device with current contact information of the user of the computer device with reason and time dependant information about the user;~~ and

enabling accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user.

Claim 17 (currently amended) A computer readable storage media comprising:
a program for a calendar screensaver method comprising the steps of:
accessing an original, updatable schedule from the memory;
displaying the original, updatable schedule on the computer display as a screensaving process while the computer device is in an inactive mode;

if the updatable schedule is accessed while the computer device is in the inactive mode, enabling input access to only the original, updatable schedule, for additional schedule inputs to create an amended schedule, while locking out other computer device functions; and

enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device ~~for providing accessors of the computer display with current reason and time dependant access information of the user;~~ and

enabling accessors of the computer display to have access during inactive

mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user.

Claim 18 (currently amended) A computer device comprising:

- memory that stores information generated by the processor;
- means for accessing an original, updatable schedule from the memory;
- a display that displays the original, updatable schedule as a screensaving process while the computer device is in an inactive mode;
- means for enabling input access to only the original, updatable schedule, for additional schedule inputs to create an amended schedule, while locking out other computer device functions; and
- means for enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device ~~to provide accessors of the computer device with current contact information of the user of the computer device with current reason and time dependant access about the user; and~~

means for enabling accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information associated with the preferred reasons of contact of the user

Claim 19 (currently amended) A calendar screensaver method for a computer device comprising memory and a display, the method comprising the steps of:

- accessing an original, updatable schedule from the memory;
- displaying the original, updatable schedule on the computer display as a screensaving process while the computer device is in an inactive mode;
- displaying a message substantially simultaneously with the original, updatable schedule;
- if the updatable schedule is accessed while the computer device is in the inactive mode, enabling input access to only the original, updatable schedule, for additional schedule inputs to create an amended schedule, while locking out other

computer device functions; and

enabling remote input access to the original, updatable schedule, as additional schedule and contact inputs for creating an amended schedule and a matrix with a time contact schedule that includes current time sensitive contact information and preferred reasons for contacting a user of the computer device with plural and alternative contact methods during certain time periods of the matrix of a user of the computer device ~~for providing accessors of the computer display with updated reason and time dependant access information about the user at the current moment; and~~

enabling accessors of the computer display to have access during inactive mode to electronic access numbers and methods of time dependant contact information at the current moment associated with the preferred reasons of contact of the user.

Claim 20 (original) The calendar screensaver method of claim 19 and further including the step of remotely updating the original schedule over a network.
